# Coolsculpting™: Effective Non-surgical alternative

You're physically fit and your weight is stable. You have a healthy diet and lifestyle. But, no matter how much you exercise or diet, you have lumps, bumps, and bulges you just can't get rid of.

Unlike most other methods of fat reduction, CoolSculpting involves no needles, surgery or downtime. CoolSculpting is completely non-invasive, so you can return to your normal activities immediately. Some patients experience redness, minor bruising, tingling or numbness in the treated area, but this is typically temporary.

CoolSculpting is a safe, effective and non-invasive way to permanently reduce fat in common trouble areas that tend to be diet and exercise-resistant.

**Call 919-438-3937 and schedule your consultation before 3/4/17 to receive special pricing.**

Note: It is important to recognize that Coolsculpting and other non-invasive technologies are less predictable at achieving results than minimally invasive procedures. To better determine whether you are a good candidate for Coolsculpting, we recommend a physician consultation, and as with all medical procedures, individual results may vary.
